

Security Incident Report

Incident Overview

Incident ID: INT-306

Reported By: Kalle Hansson

Date/Time Reported: 2025-11-08

Detection Source: Quality Assurance

Severity Level: High (P1)

Executive Summary

Summary

2025-11-08 we performed a data migration. Performing QA immediately afterwards, we detected that specific cells in our spreadsheet solution were missing. We quickly identified that the table was empty due to a truncation in the recently performed migration. We realised that we needed to do a database backup rollback. This was done successfully. Finally an email was sent out to affected users.

Detailed Timeline

Example entries, add all relevant events

Date	Time	Event Description
2025-11-08	13:30	Discovery - Kalle Hansson discovered error via QA
	13:31	Escalation - All hands on deck for tech team
	13:40	Servers shut down to stop data inflow
	13:41	Decision made to do database rollback
	14:30	Database backup rollback completed
	15:27	Email sent to affected customers

Scope and Impact Analysis

Affected Systems: All production environments

Affected Users/Data: Customer data generated up to 24h before the migration.

Breach Vector: Bug in migration script

Lateral Movement Evidence: No

Detection and Response Actions

Detection Methodology: Manual QA after the migration.

Immediate Actions Taken: Shut down server in order to stop data inflow.

Communication Log: Internal communication was made verbally in the office.

Response Effectiveness Evaluation: Quick identification, quick response time and quick solution.

Root Cause Analysis

Root Cause Category: Technical bug in migration script.

Failure Points: Quick review process due to multiple features deployed at the same time.

Preventive Measures

Lesson learned for the entire team about always taking reviews seriously.
